Filtration Process

6 Stage composite filtration with True HEPA filter

- **Pre-filter** - Captures the largest particles, enhances the durability and performance of the other filters.
- **99.97% True HEPA Filter** - Removes airborne pollutant particles such as dust mites, smoke and other airborne particles which are so small as 0.3 microns
- **Activated Carbon Filter** - Traps chemicals, odors, volatile organic compounds (formaldehyde), viruses and allergens.
- **Molecular Sieve Adsorption Layer** - Strong absorption ability to block larger particles to increase the lifespan of the activated carbon filter.
- **Cold Catalyst Filtration** - Oxidises and breaks down compounds and toxic substances such as benzene, ammonia, TVOC, etc.
- **Negative Ion** - Naturalises the air and eliminates airborne allergens and germs.
